***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 44 through 68, drawn to a method for conditioning ambient air in a room inside a building whereby the thermal content of the ambient air in the room is modified by the arrangement of latent heat accumulator bodies inside the room wherein the incoming air underneath the latent accumulator bodies is blown out by using the Koanda effect.

Group II, claims 69 through 72, drawn to a thermal buffer element having chimney-like air flow paths formed between the outer surfaces of one or more latent heat accumulator elements.

Group III, claims 73 through 81, 89, and 90 are drawn to a latent heat accumulator body having a plurality of latent heat accumulator sub-bodies located inside a closed outer holding wall.

Group IV, claims 82 through 87, drawn to an arrangement of latent accumulator bodies formed as flat bodies located in the vicinity of the ceiling of a room in a building.

Group V, claim 88, drawn to a building with a plurality of rooms having an induction ventilation feature located underneath latent heat accumulator bodies formed as flat bodies.

2. The inventions listed as Groups I through V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Groups II through V lack the Koanda effect which characterizes Group I. Groups I and II through V lack the chimney-like air flow paths formed between the outer surfaces of one or more latent heat accumulator elements which characterizes Group II. Groups I, II, IV, and V lack the plurality of latent heat accumulator sub-bodies located inside of a closed outer holding wall which characterizes Group III. Groups I through III and V lack the arrangement of latent accumulator bodies formed as flat bodies which characterizes Group IV. Groups I through IV lack the inductive ventilation feature underneath latent heat accumulator bodies formed as flat bodies which characterizes Group V.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
